

# BORON TERMITE MANAGEMENT SYSTEMS

If you are providing termite control or management services you as Pest Managers need this course now. The need for Boron treatments for termites will grow due to the eventual re writing of AS 3660 Series AS1604, Timber Treatment Standard and Timber Pest Inspection Standard AS 4349.

Because boron is a non patented product, there is a need for this course because of scant information on the various APVMA registered boron labels re application.

Boron termite treatments will deliver in a timber framed home that it will be fully protected from termites, wood decay and borers when applied correctly as per label for 50 years.

It is a termite preventative and control product like full slab and barrier soil treatments not a monitoring system as so many systems will be designated in the future. Boron treatments also help substantiality with climate change and carbon emissions.

## The course is in modules of 1hour and cover:

- **TIMBER IN CONSTRUCTION & BIOLOGICAL HAZARDS** in timber such as structures, durability and biological hazards of timber in situ. Australian Standards
- **BORON SAFETY, USE IN PEST CONTROL INDUSTRY-** what it is, where does it come from, its mode of action, its safety, its use in the pest control industry and risk management?
- **BORON APPLICATION, RISK MANAGEMENT**  
Working with the builder, application techniques, equipment to be used, quality control, how to ensure you get an excellent result.

The course covers all boron formulations and all companies' boron products and is suitable for pest managers at all levels.

The course is a half day course with three modules and 30 PCD points are available if required. A certificate of competency is issued also

Please contact the course provider BRIAN MABIN now and have your staff qualified to apply boron based products in the future new environment for us all in the pest control industry.
