Phantom® Insecticide is a major breakthrough in pest control in Australia with unique properties that make it unlike any other general pest control product. Phantom is a liquid SC formulation for the control of ants, cockroaches and bed bugs as an internal treatment and contains the active ingredient chlorfenapyr which is the only member of a new class of chemicals - the pyrroles.

Scott Kleinschmidt, Technical Manager for BASF Pest Control Solutions in Australia, explains some of the unique properties that Phantom brings to the table. "The really important and unique physical property of Phantom is that it is undetectable to pests. This means they will not avoid the treatment and will travel through the treated areas and unknowingly pick up a lethal dose." For the full article go to: www.termidor.com.au

Control pests with the undetectable power of Phantom®

All offers are available from 1-9-2010 until 30-9-2010, or while stocks last. All prices are exclusive of GST. Conditions apply.
